PDB Statistics

The main database for structural information on biomolecules. Let's see how we can use it to answer these questions:

> Download a CSV file from the PDB site (accessible from "Analyze" > "PDB Statistics" > "by Experimental Method and Molecular Type". Move this CSV file into your RStudio project and use it to answer the following questions:

```
db <- read.csv("Data Export Summary.csv")
db

Q1: What percentage of structures in the PDB are solved by X-Ray and Electron Microscopy.

```
db$X.ray
```

```
[1] "154,766" "9,083"   "8,110"   "2,664"   "163"     "11"
```

```
x.ray <- sum(as.numeric(gsub(",", "", db$X.ray)))
em.total <- sum(as.numeric(gsub(",", "", db$em)))
```

```
#I will work with `x` as my input.

sum_comma <- function(x) {
  #substitute the comma and convert to numeric
  sum(as.numeric( gsub(",", "", x)))
}
```

For X-ray:

```
sum_comma(db$X.ray) / sum_comma(db$Total)
```

```
[1] 0.8553721
```

For EM:

```
round ( sum_comma(db$EM) / sum_comma(db$Total), 2 )
```

```
[1] 0.07
```

Q2: What proportion of structures in the PDB are protein?

```
round ( sum_comma(db$Total[1]) / sum_comma(db$Total) , 2)
```

```
[1] 0.87
```

Q3: Type HIV in the PDB website search box on the home page and determine how many HIV-1 protease structures are in the current PDB?

SKIPPED!

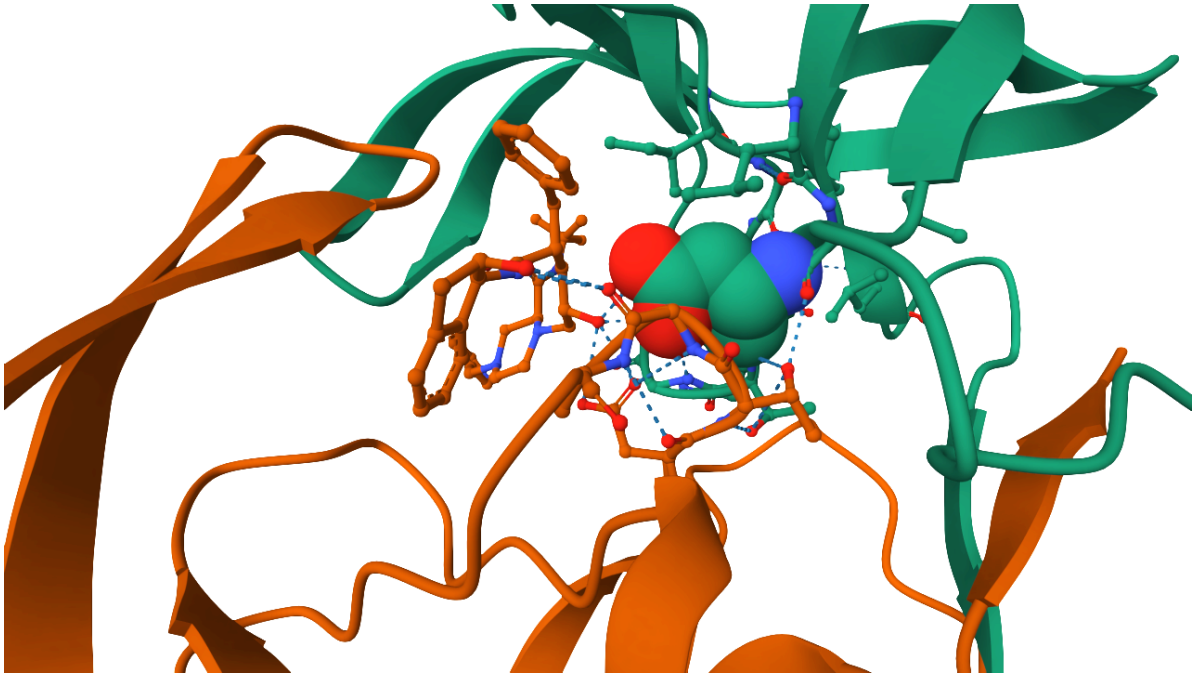

Figure 1: HIV-PR structure from MERK with a bound drug

Q4: Water molecules normally have 3 atoms. Why do we see just one atom per water molecule in this structure?

The structure is too low of a resolution to see the H atom. You need a sub 1 Angstrom resolution to see Hydrogen.

Q5: There is a critical "conserved" water molecule in the binding site. Can you identify this water molecule? What residue number does this water molecule have

HOH308

Working with Structures in R

We can use the `bio3d` package to read and perform bioinformatics calculations on PDB structures.

```
library(bio3d)

pdb <-  read.pdb("1HSG")
```

```
 Note: Accessing on-line PDB file
```

```
pdb
```

```
 Call:  read.pdb(file = "1HSG")

Q7: How many amino acid residues are there in this pdb object?

128 residues

Q8: Name one of the two non-protein residues?

HOH

Q9: How many protein chains are in this structure

2 chains
